

Sensory Processing and its impact on behaviour

- Our (7) senses take in information from the world around us. We then process and organise this information to help us know
- when and how to react.
- This process is automatic and helps us to remain safe and comfortable
- Everyone processes and organises sensory information differently.
- People with an Autism Spectrum Disorder will often register, process and organise sensory information significantly differently.
- This can have an impact on a student's ability to engage and learn.

Sensory integration as a foundation for learning

Building Bridges through sensory integration by Yack, E., Sutton, s. and Aquilla, P.
